

The following pictures depict the Charity Hound Web App typical usage.

Shown here: the initial user view of the Charity Hound Web App.

After the user touches “Login” the user can touch any of the three menu choices:

- Charities
- Report
- About

Note that the user observes a sponsor ad that automatically disappears.

If the user touches “Charities” the presentation changes. The user observes a complete list of charities that matches the list that the user maintains using non-mobile browsers. The user may scroll this list by a vertical finger drag in either direction. To quickly locate a specific charity, the user types text into the search field.

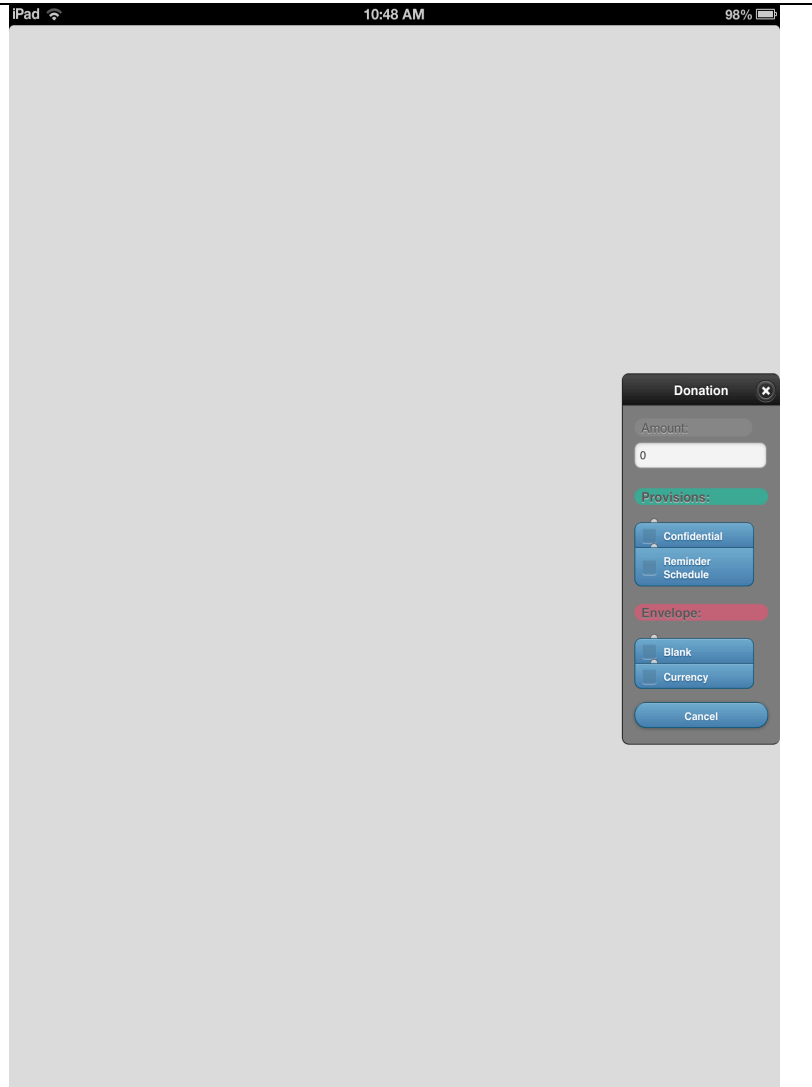

Simply touching any given charity in the list provides a mechanism to “log” (i.e. record on the server) your donation to the charity.

Once the listed charity is touched the user is presented with a simple dialog box that requests the amount that you plan to send that organization. If the user decides not to donate at this time then leaving the amount as zero and clicking anywhere outside the popup will log, instead, the receipt of the “solicitation”. To help Charity Hound with its mission we ask users to record all solicitations whether or not you plan to donate!

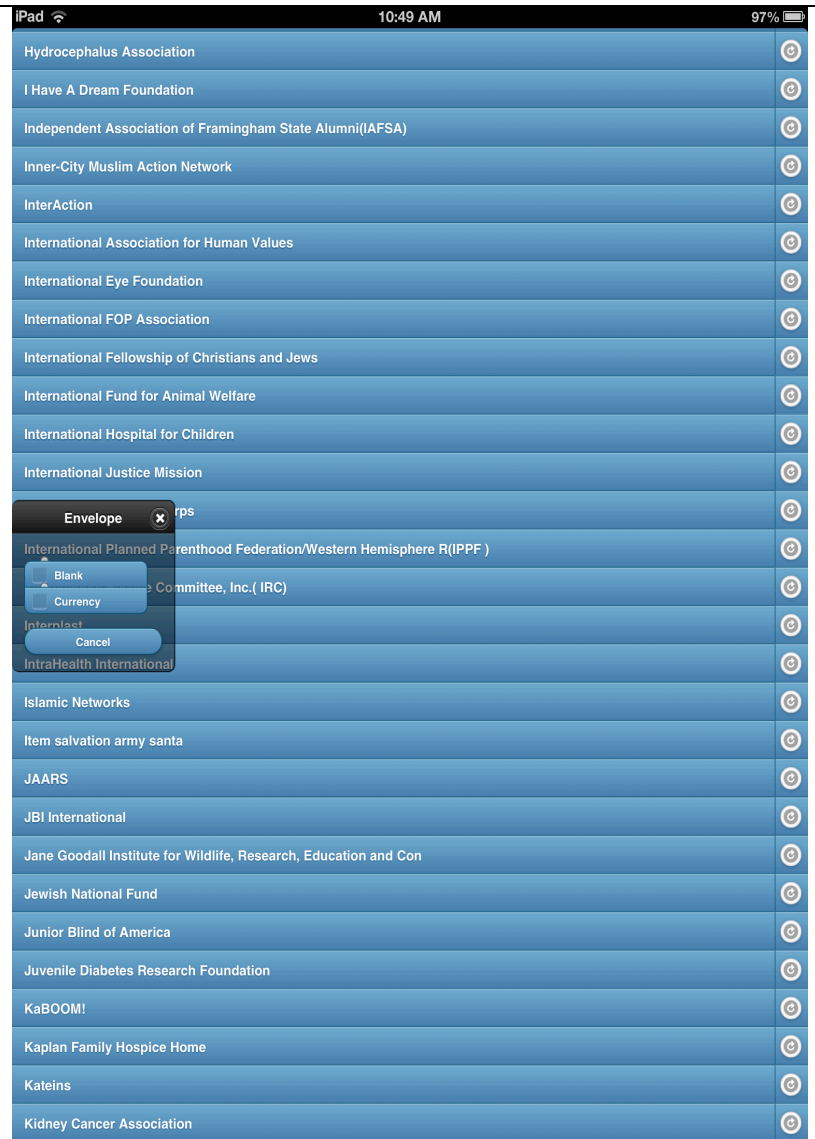

The checkbox fields help our rating system!

If the dialog is closed (the ‘X’ or Cancel) then no action is taken and nothing is logged with the server.

Our users are “hounded” by many solicitations. Indeed too many. To make it easier to log solicitations that one decides immediately to defer or never respond to, the user can touch the recycle button (far right). The touch shows a smaller popup. Then by simply touching outside the popup, the solicitation is “logged” on the server. Doing this helps us pursue our mission!

As with the donation popup, the checkboxes help us rate charities.

Always having on your person (via your mobile device) a list of charities (that you have contributed to) is a handy feature. For example during a discussion with friends someone might ask about their favorite charity. You can immediately see if you have ever given a donation to that organization for whatever time range you would like. Here the user wants to inspect their server's data just for the year 2013.

To check for 2013 simply enter 2013 as the end year (the start would automatically be reset to 2013 as well).

Set start year to some low value such as 2000 to see every year.

The screenshot shows the 'CharityHound Reports' interface on an iPad. At the top, the status bar displays 'iPad', signal strength, '10:49 AM', and '97%' battery. Below the status bar is a navigation bar with a 'Back' button and the title 'CharityHound Reports'. The main content area contains two input fields: 'Start Year:' with '2013' entered, and 'End Year:' with '2013' entered. Below these fields is a large, light gray button labeled 'View Donations'. The background of the app is a light gray gradient.

Since this is simple test data the report shown here simply shows that the user had made one contribution (to AARP) and the user had “logged” a solicitation from AFS-USA (while the user declined to give to that organization). Remember logging solicitations helps with our mission – even when you choose not to donate!

A total appears on the report’s last line.

In case you forget steps described here the “About” menu choice has a simple reminder of the steps described.

The mobile interface for Charity Hound is purposely simplified. Remember that everything described here as well as more features are available to logged in users of the web site:

[www.charityhound.org](http://www.charityhound.org).
